

Ultra Strontium

John W Jones, MD, MPH

For Strong, Healthy Bones

When taken with Vitamin D3 and Calcium, elemental Strontium at 680 mg per day has been shown to increase bone density, increase the formation of new bone and decrease bone loss. The studies were done with Strontium Ranelate, a prescription drug not available in the US at this time. Strontium Ranelate also significantly reduced spinal fractures in postmenopausal women. Strontium citrate is a more bioavailable form than the Ranelate.

- Prevent or restore the loss of calcium in the bone
- Repair damaged bone
- Reduce spinal fractures

About Strontium Citrate:

Strontium Citrate is a very bioavailable form of Strontium. It can be ionized and absorbed using the classical Calcium pathway. In a process similar to Calcium Citrate, the Strontium citrate molecule can be absorbed directly, bypassing the usual absorption pathway.

Use Ultra Strontium to prevent or restore the loss of Calcium from bone in conditions such as post menopausal osteoporosis, long term steroid use, inactivity and repair of damaged bone.

WARNING: Strontium should **NOT** be used by pregnant or lactating women, or women who might become pregnant. It should **NOT** be used by children because it will interfere with bone growth.

Since Strontium is eliminated by the kidneys its use in patients with compromised kidney function should be carefully monitored by a physician.
