

Vitamin A

Important Reasons to use Vitamin A

- Accelerate recovery from viral and other infections.
- Lessen blood loss in menorrhagia.
- Promote healing of gastric ulcer and Crohn's disease.
- Help night blindness.
- Enhance the integrity and healing of mucus membrane in the GI tract, GU and respiratory system.

Vitamin A has many important uses in the body. The rods, located in the retina, need it for proper vision. It helps heal mucus membranes. Therefore, it helps promote healing of the gastro intestinal mucosa. Analysis of the American diet reveals that it provides only about 4000 units daily. This deficiency produces many problems, such as visual changes, skin dryness and increased infections.

Vitamin A promotes healing epithelial tissue, the gastro intestinal tract, respiratory system, genital-urinary tract and skin. It enhances immune function, thus protecting against infections and assisting and promoting healing.

WARNING: Vitamin A is stored in the body and not excreted. Toxicity may occur if dosage exceeds 25,000 IU over an extended period of time. Limit vitamin A to 5000 IU per day (from *all* sources) in females who might become (or who are) pregnant, as it can be teratogenic to the developing fetus.:
